Problem F The Last Non-zero Digit.

Input: Standard Input
Output: Standard Output
Time Limit: 30 seconds

In this problem you will be given two decimal integer number N, M. You will have to find the last non-zero digit of the ${}^{N}P_{M}$. This means no of permutations of N things taking M at a time.

Input

The input file contains several lines of input. Each line of the input file contains two integers N = N = 20000000, M = 0 = N. Input is terminated by end-of-file.

Output

For each line of the input file you should output a single digit, which is the last non-zero digit of ${}^{N}P_{M}$. For example, if ${}^{N}P_{M}$ is 720 then the last non-zero digit is 2. So in this case your output should be 2.

Sample Input

10 10

10 5

25 6

Sample Output

8

4

2
